

# Community Solar Reservation Form

By meeting members' requests for renewable energy, the Board of Directors of Boone Electric Cooperative made the decision to construct a community solar farm at Boone Electric's headquarters in Columbia. Members have the opportunity to purchase output from the 100-kilowatt system on a per panel basis. A single solar panel will produce 41 kWh/month on average. The output can range from 24 to 52 kWh/month because of seasonal conditions. Monthly output will then offset energy use at the member's primary residence. This community solar farm gives an outlet to participate for members who are interested in renewable energy and those unable to place their own solar panels.

## Member Information:

Name: \_\_\_\_\_ Account Number: \_\_\_\_\_

Service Address: \_\_\_\_\_

City: \_\_\_\_\_ State: \_\_\_\_\_ Zip Code: \_\_\_\_\_

Email Address: \_\_\_\_\_ Daytime Phone: \_\_\_\_\_

## Cost:

The cost to members will be an additional average of \$3/month per panel based on the average yearly output, in addition to your existing utility bill. The price is subject to change annually based on the output of the panels. Members may opt out at any time without penalty. Boone Electric will manually review applications to match kWh use with number of panels requested.

Requested Number of Panels: \_\_\_\_\_

Member Signature: \_\_\_\_\_ Date: \_\_\_\_\_
